

Read correction across 15 adjacent release edges — complete: v5 15/15

Q-v5: cross_phi, pure, 8 joint epochs. H: retained complete v4 C128 results. Calibration + additional inference FLOPs; 3,000 fixed development users per edge. Y-axis shared within each scale row; ranges differ across scales. Negative and above-100% recovery remain visible. Prior cheap H-v1 control is retained on every edge.
